

United States Department of Agriculture
Federal Grain Inspection Service

Program Handbook

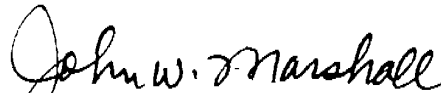

January 1991

Foreword

The effectiveness of a uniform inspection system is dependent on an inspector's ability to correctly sample, inspect, grade, and certify the various grains for which standards have been established. In view of this fact, the Grain Inspection Handbook, Book IV, "Forms and Certificates," is being published.

The handbook illustrates step-by-step procedures for completing inspection service applications, documenting inspection activities, printing and completing inspection certificates, and reporting inspection information.

Official inspection personnel shall use this handbook as a guide when designing and completing inspection forms.

John W. Marshall
Director
Field Management Division
